

Connection to the Enforcer/HomeControl+ panels:

When connecting the communications module, make sure that the control panel is fully powered-down (mains and battery).

Enter the Engineers menu on the control panel and then go to **COMMUNICATIONS? -> Data Network Set-up? -> Program WiFi -> Setup with Wi-Fi Device?**

Press **NO** to enter the SSID and password of your router manually (pressing **YES** after each entry) - or see the other side of this leaflet for setup using a smartphone, tablet or PC.

NOTE: SSID /Passwords should not have a space at the beginning or end and must not exceed 32 characters in length.

Firewall compatibility:

In cases where there is a strong FIREWALL it will be necessary to assign the network details into the modem manually.

NOTE: It is important in such cases to notice that if the firewall has all ports closed then the system administrator must open ports **TCP 25010 (Inside UDL) , 25000 (panel) and 443 (App) for OUTGOING TRAFFIC ONLY** to allow UDL and use of the HomeControl+ APP.

Operation LEDs:

Single pulse:
No Cloud connection.

Single-Double alternating pulse: Cloud connected

Double Pulses:
when APP connected

On at startup.
Also pulses rapidly during network setup procedure (steps 1 - 4)

Pulses to indicate local network traffic

Not Used

DIGI-WiFi

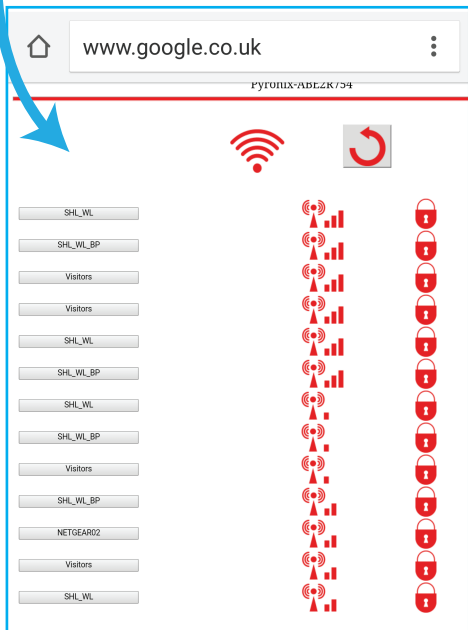

Modem data and power connection:
MUST USE SUPPLIED CABLE. DO NOT RE-USE CABLES FROM DIFFERENT COMMs MODULES.

Setup the WiFi from a PC or Smartphone:

1 Enter the Engineers menu on the control panel and then go to **COMMUNICATIONS?** -> **Data Network Set-up?** -> **Program WiFi** -> **Setup with Wi-Fi Device?**

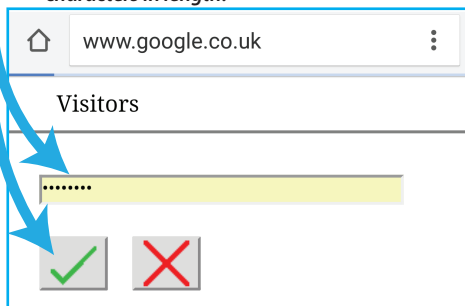

Press **YES** to display the panel SSID and password then go onto your PC or smartphone.

2 Connect your device to the control panel WiFi (it appears as a local WiFi network) and then open a web browser to see the list of connections available (enter any web address - it should redirect to this page automatically).

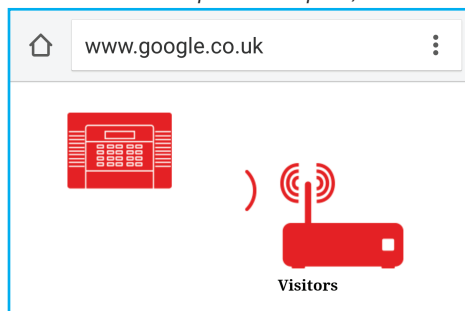

3 Select the connection /router that you wish to connect to, enter the router password / key and then select the 'tick' button shown below.

NOTE: SSID /Passwords should not have a space at the beginning or end and must not exceed 32 characters in length.

4 The panel will begin connecting to the selected router and you will see the animation shown below. Go back to your control panel and wait until the display shows "Connected to Network". Finally, exit the Engineers menu and close the browser on your phone / device (the device will lose connection to the panel at this point).

IMPORTANT NOTE: The DIGI-WiFi can only be used on HomeControl+ Enforcer control panels V2.1 and above.

Technical Specification

Current draw: 30mA

Modem Data Connection: Data connection to control panel PCB.

Formats: Fast Format IP (UK Only), Contact ID IP, SIA IP, supports upload/downloading.

Operating Temperature: -10°C to +40°C

Dimensions: 109 x 56 x 11mm

Troubleshooting:

- First of all - check that the correct modem type is selected within the 'ARC Signalling' menu of your control panel.
- If experiencing connectivity problems - go into the 'DIAGNOSTICS' menu, and then the sub-menu within diagnostics called 'Communications' (not the separate 'COMMUNICATIONS' menu). Here you can view the IP address and see if the panel is polling the Pyronix Cloud or your ARC.
- If no LEDs are displayed, check the cables and power connection.
- If the DIGI-WiFi is not recognised by the control panel, power down and back up.
